## FELIX ELADI

---

 [linkedin.com/in/felix-eladi](https://www.linkedin.com/in/felix-eladi)  [felixeladi.office@gmail.com](mailto:felixeladi.office@gmail.com)  [github.com/Ela-El-maker](https://github.com/Ela-El-maker)

### SUMMARY

Accomplished Systems Software Engineer focused on the hardware-software interface, operating system internals, and low-level networking. Transitioned from product-level development into systems programming with a first-principles understanding of the full execution stack—from pre-boot firmware through kernel and user space. Equipped with hands-on experience in UEFI-level security, production environment hardening, and building low-level abstractions for security-critical systems.

### PORTFOLIO

 [www.portfolio.felixeladi.co.ke](http://www.portfolio.felixeladi.co.ke)  [Résumé](#)

### KEY TECHNICAL SKILLS

#### Frontend

**Languages:** JavaScript, HTML5, CSS3  
**Frameworks:** Livewire, Flutter  
**Testing:** TDD with PHPUnit, PyUnit  
**Tools:** Webpack, WebHooks, Git, Figma  
**Code Management:** Git, GitHub

#### Backend & Infrastructure

**Languages:** Node.js (JavaScript), Python, PHP, C/C++  
**Frameworks:** Laravel, FastAPI  
**Web:** REST, GraphQL, WebHooks, WebSockets  
**Deployment:** Netlify, Vercel, Heroku, Microsoft Azure  
**OS Internals:** Windows Internals, Linux Kernel (SELinux), System Call Interception  
**Security:** Zero Trust Architecture, RBAC, Cryptographic Identity (Ed25519)  
**Databases:** MySQL, MongoDB

### PROFESSIONAL EXPERIENCE

#### Business Systems Architects Ltd — *Technical Operations Support (Internship)*

May 2025 - September 2025

Currently, I manage infrastructure reliability and automation, focusing on hardware-software interoperability and aggressive fault isolation in production environments.

- **Infrastructure Automation:** Developed Python-based health checks and observability pipelines, reducing manual intervention by 30% and improving Mean Time To Recovery (MTTR).
- **Distributed Monitoring:** Engineered deployment strategies for enterprise IoT monitoring (AKCP) to maintain 99.9% availability across distributed nodes.
- **Access Control:** Architected Least Privilege (PoLP) and RBAC policies at the OS level for production servers to mitigate lateral movement risks.

#### Daystar University — *Network & Systems Operations (ICT Intern)*

2021 - 2022

Supervised campus-wide infrastructure, data center health, and large-scale hardware reclamation projects serving over 5,000 users.

- **Hardware Recovery:** Orchestrated the salvage of 300+ legacy systems; reclaimed RAM, storage, and power units to deploy two new fully functional computer labs.
- **Network Resilience:** Diagnosed L2/L3 bottlenecks using packet analysis (Wireshark) to optimize routing tables and increase network uptime by 20%.
- **OS Deployment:** Managed mass migrations from Windows 7/8/10 to Windows 11 and Linux, handling critical data recovery and user-mode isolation.

#### Daystar University, Machakos, Athi River,

#### Independent Engineering — *Systems & Software Engineer*

## 2021 - Present

Established a long-running practice spanning hardware repair, operating system internals, and full-stack architecture to understand modern platforms end-to-end.

- **Low-Level Diagnostics:** Diagnosed and repaired hundreds of personal computing systems, mastering safe-mode diagnostics, boot-mode configurations, and hardware surgery.
- **Enterprise Architecture:** Built full-stack systems including job portals and e-commerce platforms to study high-concurrency patterns and strict RBAC architectures.
- **Payment Integration:** Implemented real-world payment orchestration using M-Pesa Daraja API, PayPal, and Paystack, managing secure transaction callbacks and authentication.

## HIGHLIGHTED PROJECTS

### **My Portfolio (OS-Windows-11-inspired portfolio) - [Ela-OS-Portfolio](#)**

A high-fidelity desktop environment built in the browser to showcase complex state management and systems thinking.

- Reimagined the browser as a desktop OS using **Next.js** and **TypeScript** to mimic Windows 11 features.
- Managed deep system states using **Redux Toolkit**, handling overlapping window z-indexing and taskbar logic.
- Proven technical depth by pairing intuitive UI/UX design with heavy architectural state synchronization.

### **Regional Career Infrastructure - [jobs.felixeladi.co.ke](#)**

Architected a high-concurrency engine with multi-tenant logic to unify youth employment pipelines in regional markets.

- Utilized **Laravel** and **MySQL** to build a robust **RBAC** (Role-Based Access Control) system for thousands of users.
- Transformed fragmented educational data into a scalable regional infrastructure for matching talent to opportunity.

### **Up-Skill: Fintech-Enabled Learning - [up-skill.felixeladi.co.ke](#) [\(In Development\)](#)**

A mobile solution addressing software compliance and payment friction in local skill-acquisition hubs.

- Integrated **M-Pesa APIs** for instant liquidity and built a **GitHub-synced** engine for mandatory fleet updates.
- Ensured 100% version compliance across distributed devices via automated update protocols.

### **High-Resilience Device Control - [Secure-Device](#) [\(In Development\)](#)**

Engineered a multi-layered security system to manage hardware remotely in high-latency environments.

- Designed a secure control plane using **C++** for Kernel-level operations (**IOCTL**) and **FastAPI** for WSS orchestration.
- Implemented cryptographically secure device identity using **Ed25519** signatures to enforce command integrity.
- Bridged the gap between low-level hardware constraints and high-level architectural leverage.

## EDUCATION

### **B.Sc. Applied Computer Science** — *Software Systems & Infrastructure*

**Daystar University, Kenya** 2022 – 2025 (*Awaiting Graduation 2026*)

Transitioned via a high-performance bridge program; focused on advanced software systems, distributed infrastructure, and applied computing.

- **Relevant Coursework:** Operating Systems, Compiler Design, Distributed Systems, Network Security, Data Structures & Algorithms.
- **Self-Directed Research:** Exploration of **xv6** kernel internals, x86-64 assembly, and UEFI firmware security protocols.

### **Diploma in ICT** — *Networking & Systems Administration*

**Daystar University, Kenya** 2020 – 2022 (*Awaiting Graduation 2026*)

Completed a comprehensive ICT foundation program with a heavy emphasis on practical systems and network engineering.

- **Core Focus:** Network configuration (Cisco/Ubiquiti), hardware diagnostics, and systems troubleshooting.
- **Achievement:** Awarded departmental recognition for leadership in laboratory hardware reclamation projects.
